FULL STACK DEVELOPER | JavaScript | NodeJs | ReactJs

Developer with experience building and maintaining web applications using Node.js, TypeScript, and React. Familiar with AWS services (EC2), CI/CD workflows, and Agile/Scrum practices. A collaborative team player with strong troubleshooting skills, eager to learn, contribute to code quality, and grow within a fast-paced engineering environment.

Technical Skills

- **Languages:** JavaScript (Node.js), TypeScript, Java (academic)
- **Backend & Systems:** Node.js, Express.js, REST APIs, Linux environments
- **Databases:** MongoDB, PostgreSQL (exposure)
- **Testing:** Unit & integration testing (Jest, Supertest)
- **DevOps & CI/CD:** GitHub Actions, automated builds/tests, PM2
- **Cloud & Deployment:** AWS EC2, Vercel
- **Practices & Tools:** Git, Agile workflows, documentation, cross-functional collaboration

Experience

Full Stack Developer (Contract)

Client Web Platform | Node.js, Express, AWS

October 2024 – October 2025

- Contributed to the development and integration of backend services using Node.js and Express, supporting production CRUD operations and RESTful APIs, and integrating with an existing Next.js/React frontend in collaboration with a frontend developer
- Deployed and supported backend services on Linux-based AWS EC2 environments, including environment configuration, runtime management with PM2, and controlled production updates
- Implemented automated unit and integration tests using Jest and Supertest, validating API behavior and reducing regression issues prior to deployment
- Configured CI/CD pipelines using GitHub Actions to automate testing and deployment workflows for backend services; supported frontend deployments targeting Vercel
- Worked with MongoDB to design and implement data models and queries aligned with application requirements
- Collaborated within a cross-functional team (designer and frontend developer), documented backend setup and deployment workflows, and investigated defects using logs and debugging tools to support timely delivery

Projects

Retrieval-Augmented Question Answering System (Personal Project) | [GitHub](#)

Node.js, Express, LangChain

- Developed a prototype system that answers user questions from company documents, combining data ingestion, backend processing, and controlled AI usage.
- Focused on safe system behavior by restricting responses to approved content and providing source references, exploring responsible integration of emerging technologies.

What-If Investment Simulator (Personal Project) | [GitHub](#)

Node.js, TypeScript, Next.js, Express

- Built a web application that answers “what if” investment questions using historical data, with a focus on correctness, clear assumptions, and reproducible results.
- Implemented backend logic with validated inputs, automated tests, and predictable system behavior, and deployed the application to cloud environments for real-world use.

Education

Bachelor of Applied Computer Science
University of Winnipeg, Winnipeg, MB

June 2024
